## Benefits of using Enterprise Resource Planning Systems (ERP)

\*Mr. Kekane M.A.

---

### Introduction

The efficient flow of data in an enterprise is important from the business management point of view. ERP get fast information about finance, production, purchases, stock, etc., the business cannot function properly. ERP systems are a part of Integrated Information Management Systems (IIMS). ERP systems are depends upon purely IT tools in business. Using the ERP systems, businessman can the management planning and Process.

### Objective of the Study:-

The main objectives of the study are as follows:

- 7.To study to understand concept of ERP.
- 8.To study of characteristics of ERP system.
- 9.To study of various benefitof ERP implementation.

### ❖ Research Methodology:-

#### a. Sample Method:

The researcher used convenient Sampling methodthe respondents. The benefits of the samples are that it is very easy and economical also.

#### b. Sample Size

The Sample size of the study is 20 respondents.

#### c. Sources of Data collection

This research paper I have used secondary method for data collection books, journals, newspapers, websitesetc. throughbeneficiary for data analysis.

### Characteristics of ERP system

- 1.Flexible:
- 2.Open:
- 3.Comprehensive:
- 4.Online-Connection:
- 5.Multi-Facilities:
- 6.Strategic planning:
- 7.Optimize the data:
- 8.Project Management:
- 9Automatic Functions:

### Benefits of ERP systems Application

- 1.Quality Management
- 2.Cost Reduction
- 3.Customer service improvement
- 4.Collaboration with company's various department
- 5.Increase the efficiency work
- 6.Easy to distribution processes
- 7.Economic situation increased,
- 8.Financial situation improvement
- 9.Increased staff skill
10. Increased save data
11. Current easy to access to information
12. Increase in goodwill of business

**Table.1. Benefits of ERP implementation**

Name 1- Less Important 3- Most Important	1	2	3	Total Respondents (20)
Increased profit	1	2	17	20
Inventory reduction	6	9	5	20
Saved production time	7	9	4	20
Increase in work Efficiency	6	10	4	20
Update access to information	1	4	15	20
Productivity Growth	1	3	16	20

Table no. 1 analysis various important benefits of the ERP system update access to information, profit increase, productivity growth, are of primary importance. ERP systems allow more effective control of the business changes, which is particularly important constant economy and regulatory changes, etc

### CONCLUSIONS

Large manufacturing business is not able to smooth functions properly today without support of IT system. The computerization of all the areas of the business various operations results in the increase of its efficiency and effectiveness. It is not sufficient of implement easy software, but a multi-module ERP system also. These systems are mainly used in large and medium sized business. An enterprise using the ERP system is dependent on the IT system. It is necessary to setup properly time of implementation the needs of the business.
